AXYON.AI

AI & Deep Learning solutions for Finance

- Company
- Products
- Axyon Platform
- SHAPE-PRACE project
- EOSC-HUB project

Axyon AI leverages the most recent advancements in Al and deep learning to create business applications for trading and asset management

> Main investors ING 3 UniCredit

Axyon AI technology

Proprietary deep learning technology for financial time series

More than 10 Al-powered strategies launched B

Continuous R&D activity to explore new frontiers (Reinforcement learning, Generative models)

More than 100K hours spent in computing per year

(continuously growing)

AXYON.AI

IRIS: Data and predictions flow

AXYON.AI

Why do we need computing power?

Why do we need computing power?

g

- Single model evolution process unifying hyperparam. optimization and feature selection
- Fully automated
- Improved time-series splitting with meta-validation
- Improved Genetic Algorithm features

Fully automated model training & evaluation

Test and Production

X AXYON.AI

Axyon core platform 2.0

Axyon core platform 2.0

Axyon core platform 2.0

- Master-slave architecture
- Designed for improved scalability and flexibility for multiple jobs
- Supports both cloud-like and HPC-like slave clusters
- Central job dispatcher, managing one or multiple slave clusters
- Containerized slaves with simpler logic (job executor only)
- Currently in production environment @AxyonAl
- CINECA D.A.V.I.D.E.-approved V
- CINECA MARCONI100 is on the way!

EOSC - HUB project

Axyon core platform 2.x

Objectives

- Parallel distributed training
- Take advantage of
 - Multi-GPU on a single node
 - Multi-node computation for a single ML job
- Huge dataset support ~TeraBytes
